

Troubleshooting viewing and/or downloading interactive PDFs

Various browsers react differently to interactive PDFs. If you are using Internet Explorer, the interactive PDF should appear in your browser and you should be able view and work on this PDF without any further action. If you are using Firefox or Chrome, when you click on the link to the PDF, you may encounter a message like this...

Please wait...

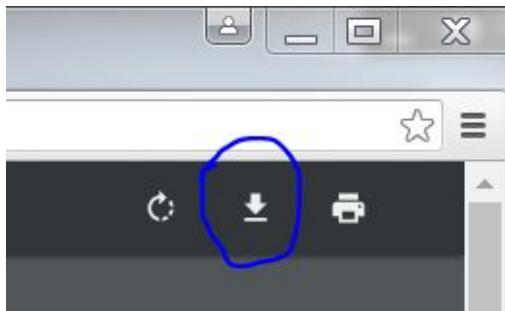

If this message is not eventually replaced by the proper contents of the document, your PDF viewer may not be able to display this type of document.

You can upgrade to the latest version of Adobe Reader for Windows®, Mac, or Linux® by visiting http://www.adobe.com/go/reader_download.

For more assistance with Adobe Reader visit <http://www.adobe.com/go/acrreader>.

Windows is either a registered trademark or a trademark of Microsoft Corporation in the United States and/or other countries. Mac is a trademark of Apple Inc., registered in the United States and other countries. Linux is the registered trademark of Linus Torvalds in the U.S. and other countries.

If this message is not replaced by the contents of the document, the best solution is to download the document to your desktop where you can view and work on the PDF. While the “Please wait...” message is on your screen, move your cursor to the top right of the page over the arrow that is pointing down towards a small horizontal line (see image below). Click on this arrow and you will be able to download the document.
